Read the article about three young people's ideas. For statement 1, mark A, B or C. This person wanted to help his/her parents.

Three Young People with Clever Ideas
A. Richard

Richard lives on a farm in Kenya which belongs to his mum and dad. They were losing money because lions often came and killed their cows at night for food. Richard wanted to do something. At first, he tried to use fire, but unfortunately lions weren't scared of it and came back to the farm again. Next, he decided to use lights from old motorbikes, which he connected to a battery. At night, the lights went on and off. The lions saw this and never returned to the farm.

B. Madison

Madison always thought that beaches should be beautiful, but they aren't when they're covered in old plastic bottles! She hated seeing beaches like this. She knew that there is also plastic in the sea, and that sometimes, turtles and other sea animals might think it is food. So Madison invented a bottle that people can safely eat after they have used it. She believes that the world will be a better place if people don't use plastic any more. Madison's parents are very happy that she has so many great ideas!

C. Hannah

Hannah had a friend who said that her parents didn't have enough money for electricity. So Hannah made a piece of equipment for the family, which makes electricity from the waves in the sea for free. But she doesn't want to sell her invention. She is letting anyone who wants to use her idea to make the equipment for themselves, for free.
